

EMERGENCY LIGHTING SYSTEM TESTING

In any emergency, adequate lighting in your building is critical. Without it, emergency procedures can't be followed. And that can lead to panic, injuries and, perhaps, loss of life.

SimplexGrinnell emergency lighting services go well beyond what's commonly referred to as the "button test." And that's important, because the button test is only a quick check that tells you if the system batteries have power. It won't verify whether the unit will switch on for a sufficient period of time during a power loss.

SimplexGrinnell's testing, on the other hand, tells you all you need to know about your emergency lighting units. With our best-in-class services, you can be absolutely sure your building and its occupants won't be left in the dark.

If the power goes off, the emergency lights go on. That's what you can expect from SimplexGrinnell.

Safety-first is our mission at SimplexGrinnell. However, knowing you have a business to run, we try to plan our inspections around your schedule:

- We conduct a thorough, 90-minute test every year. And we do it while power to the emergency lighting units is shut down, to ensure that your system will operate at peak efficiency in an emergency.
- To minimize disruption of your facility, we perform all our inspections on a pre-scheduled basis.
- Compared with unbudgeted emergency repairs, SimplexGrinnell service is highly affordable. And you can opt for component replacement on a per-item basis or as part of an inclusive annual agreement.
- Your system will be tested in accordance with National Fire Protection Association (NFPA) 101, the Life Safety Code, as well as applicable local codes.

Let SimplexGrinnell be your single source for life-safety system services. We'll keep you a step ahead of any emergency.
